

YOU BUILD IT

Zoom off in this LEGO Race Car

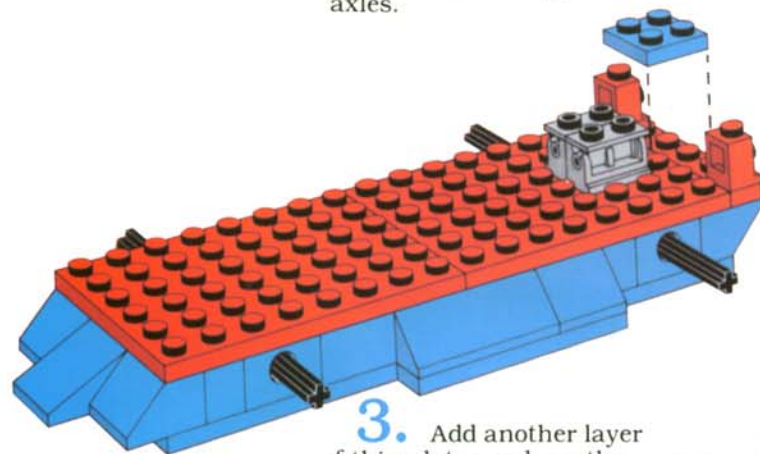

In every issue of BRICK KICKS, the "You Build It" section gives club members helpful tips and exciting building ideas. You can follow these basic instructions to make the model shown and then the fun begins when you create your own fantastic LEGO designs!

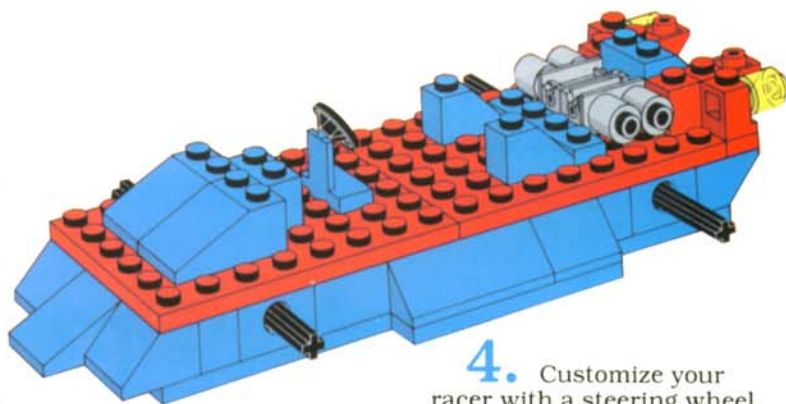

1. Create the chassis with thin plates.

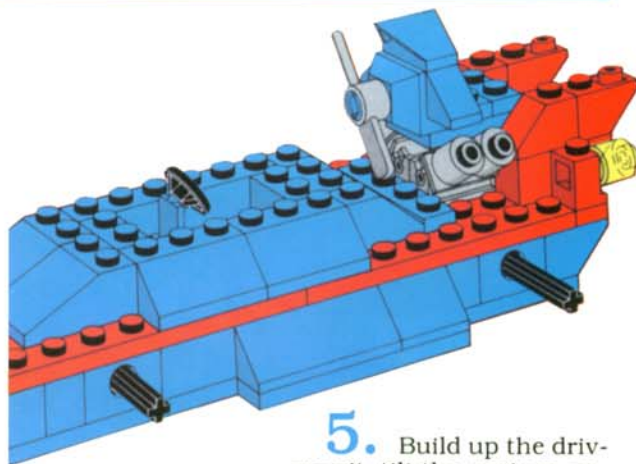

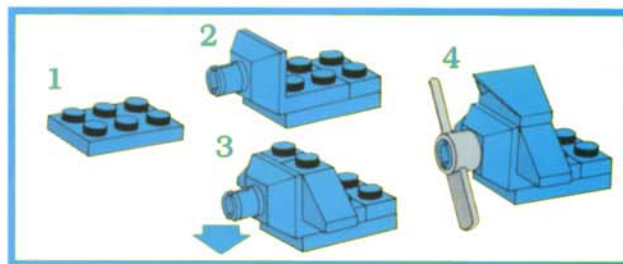

2. Start building the body and don't forget the axles.

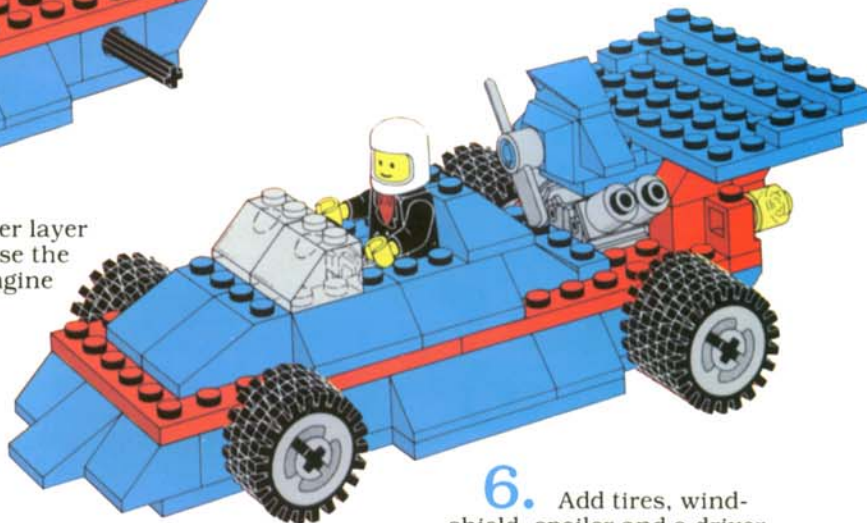

3. Add another layer of thin plates and use the two connecting hinge elements for your engine block.

4. Customize your racer with a steering wheel, tail lights and powerize your engine.

5. Build up the drivers pit, tilt the engines upward and finish the engine with the propeller-driven booster.

6. Add tires, windshield, spoiler and a driver. Now you're ready for your own Grand Prix racing.
